

SaaS ecosystem security and compliance

Stop unauthorized PHI access before it spreads.

Protect the sensitive data flowing across your third-party apps and connected services

Attackers aren't just breaching a single misconfigured SaaS app; they're exploiting the web of integrations, non-human identities, AI automations, and data flows that link these applications together. It's a complex and growing attack surface. It's also largely unmonitored.

Vorlon combines SaaS security posture management (SSPM), NHI security, data flow visibility, and detection and response, so you can see the full picture: what's connected, what's at risk, and what needs immediate action. After an agentless, proxy-free setup, you can monitor sensitive data flows, manage secrets, detect anomalies, and revoke access. With its agentless, patent-pending DataMatrix™ technology, Vorlon builds a live model of your SaaS environment to power fast, AI-driven remediation.

Protect your healthcare SaaS ecosystem and beyond

Visibility

Map third-party apps, APIs, and downstream services to monitor sensitive data and app-to-app connections.

Threat Detection

Detect unauthorized API activity, abandoned credentials, and unusual data-sharing behaviors that put sensitive data at risk.

Automated Response

Revoke risky credentials and remediate incidents via workflows integrated with SIEM, SOAR, IAM, and threat intel.

Continuous Monitoring

Detect policy drift and access violations to maintain HIPAA, HITECH, and HITRUST compliance.

Actionable Alerts

Prioritize security alerts based on business impact—by apps, data flows, and downstream services.

Compliance-ready Reports

Support privacy requirements while providing actionable insights for security teams and application owners.

Vorlon addresses healthcare SaaS ecosystem security challenges

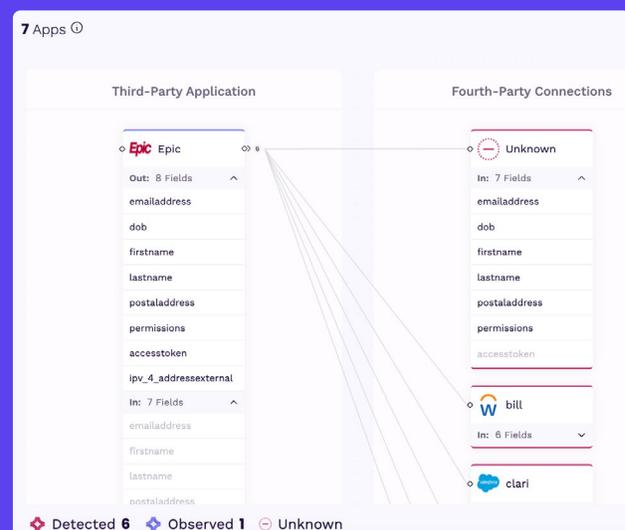

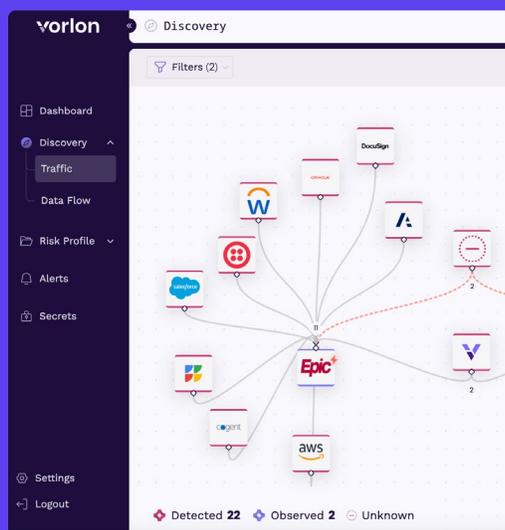

Challenge

- ❌ SaaS vendor breaches expose PHI, potentially leading to HIPAA violations and reputational damage.
- ❌ Third-Party Risk Management Programs (TPRM) provide point-in-time external risk assessments.
- ❌ Managing secrets (API keys, credentials, and OAuth tokens) in spreadsheets is a tedious, manual process.
- ❌ SaaS misconfigurations expose sensitive PHI and financial data.
- ❌ HIPAA, HITRUST, and HITECH compliance require continuous monitoring, strict access controls, and audit-ready reporting.

How Vorlon helps

- ✅ Rapidly assess the impact of a third-party data breach and prevent further exposure.
- ✅ Add real-time security monitoring to your TPRM program to detect suspicious behavior.
- ✅ Centralize NHI security, manage hygiene, and monitor secrets. Revoke access in two clicks.
- ✅ Get visibility into APIs, risky misconfigurations, and sensitive data flows.
- ✅ Simplify compliance by automatically collecting evidence. Run audit-ready reports for PCI and data privacy mandates.

Secure what others miss: the interactions between apps, identities, and data that power your business.

About Vorlon

Backed by Accel and SOC 2 Type 2 Certified, Vorlon is trusted by Fortune 500 companies and startups. Learn more at vorlon.io.
